## DETAILED ACTION

### ***Claim Rejections - 35 USC § 112***

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claims 18 and 19 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. As amended, independent claim 18 requires that the extension direction of a plurality of N syringes in the support is substantially perpendicular to that of the nozzles installed at each syringe of a plurality of syringes. First, the nozzles are defined as part of the syringes and thus, it is unclear how the syringes and nozzles can have "extension directions" that are perpendicular to one another. It appears from Figure 5 that the syringes and nozzles extend in a perpendicular direction to the longitudinal direction of support 520- thus, the nozzles and syringes have extension direction that are parallel to one another. Second, applicant's annotated Figure 5 in the Remarks suggests that the "extension direction" of the syringes in parallel to the longitudinal direction of support 520. It appears from Figure 5 that said syringes are spaced from one another along the longitudinal direction of support 520; however, nozzles 532A-532F, which represent one component of each syringe, are similarly spaced from one another along the longitudinal direction (from one

syringe to the next). Thus, it is unclear how the respective "extension directions" are perpendicular to one another. If applicant intends to define the structure of the nozzle arrangement, it is suggest that the claims be amended to require (a) each syringe include a body having an extension direction (vertical) perpendicular to the longitudinal direction of a support, (b) each body attached to a connection portion having a longitudinal direction that is perpendicular to the extension direction of said bodies, and (c) each connection potion includes a plurality of nozzles that extend in a direction parallel to the extension direction of said bodies.

### ***Response to Arguments***

3. Applicant's arguments with respect to claims 18 and 19 have been considered but are moot in view of the new ground(s) of rejection.

### ***Conclusion***

4. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

Art Unit: 1791

the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
